## 6 Second ECG Worksheet

## *STUDENTS ARE TO COMPLETE ONLY THE STRIPS THEY WENT OVER IN PART A THEORY CLASS DURING LAB, AND THE REMAINING FOLLOWING PART B THEORY*

1. Too fast? __No $\qquad$ Too slow? $\qquad$ No $\qquad$ Rate OK? $\qquad$ Yes $\qquad$
2. QRS wide or narrow? $\qquad$ Narrow $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$ Atria $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: Sinus rhythm
Answer: Each R-R interval is 21 small boxes apart: ventricular rhythm is regular. P-P intervals are also 21 small boxes apart: atrial rhythm likewise is regular. NOTE: Generally, when R-R intervals vary by 3 or more boxes, the rhythm is irregular.
5. 

1. Too fast? $\qquad$ No $\qquad$ Too slow? $\qquad$ Yes $\qquad$ Rate OK? $\qquad$ No $\qquad$
2. QRS wide or narrow? $\qquad$ Narrow $\qquad$ R $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$ Atria $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: Sinus bradycardia

Answer: Each R-R is 31 small boxes apart: ventricular rhythm is regular. P-P intervals are also 31 small boxes: atrial rhythm is also regular. NOTE: Generally, when R-R intervals vary by 3 or more boxes, the rhythm is irregular.
3.

1. Too fast? $\qquad$ Yes $\qquad$ Too slow? $\qquad$ No $\qquad$ Rate OK? __No $\qquad$
2. QRS wide or narrow? $\qquad$ Narrow $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$ Atria $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: Sinus tachycardia
Answer: Each R-R interval is 12 small boxes apart: ventricular rhythm is regular. P-P intervals are also 12 small boxes: atrial rhythm is also regular. NOTE: Generally, when R-R intervals vary by 3 or more boxes, the rhythm is irregular.
5. 

1. Too fast? $\qquad$ Yes $\qquad$ Too slow? $\qquad$ No $\qquad$ Rate OK? __No $\qquad$
2. QRS wide or narrow? $\qquad$ Narrow $\qquad$ Atria $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: Atrial flutter
Answer: Each R- R interval is 16 small boxes wide: ventricular rhythm is regular. "Flutter" waves are occurring at regular intervals of approximately 4 small boxes consequently the atrial rhythm is also regular.
5. 

1. Too fast? __Yes $\qquad$ Too slow? __No $\qquad$ Rate OK? __No $\qquad$
2. QRS wide or narrow? __Narrow $\qquad$ Not visible $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: Supraventricular Tachycardia
Answer: Each R-R interval is 9 small boxes apart: ventricular rhythm is regular. P waves are not visible and may be hidden within the T wave and, therefore, the P-P interval cannot be measured.
5. 

1. Too fast? __Yes $\qquad$ Too slow? $\qquad$ No $\qquad$ Rate OK? $\qquad$ No $\qquad$
2. QRS wide or narrow? $\qquad$ Narrow $\qquad$ Not visble $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Irregular $\qquad$
The rhythm is: Atrial fibrillation
Answer: R-R intervals change throughout with some varying by 3 or more small boxes: ventricular rhythm is irregular. There is no predictable pattern to the irregularity. Consequently, this rhythm is "irrregularly irregular". The atrial rhythm is completely unorganized and chaotic.
5. 

1. Too fast? __No $\qquad$ Too slow? __No $\qquad$ Rate OK? $\qquad$ Yes $\qquad$
2. QRS wide or narrow? $\qquad$ Narrow $\qquad$ _Atria- P's present, Fixed \& prolonged PR ineck ther $\qquad$
3. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: $1^{\text {st }}$ Degree AVB
Answer: Each R-R interval is 23 small boxes apart: ventricular rhythm is regular. P-P intervals are also 23 small boxes apart: atrial rhythm is likewise regular.
4. 

1. Too fast? __No___ Too slow? __Yes $\qquad$ Rate OK? __No $\qquad$
2. QRS wide or narrow? __Narrow $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$ Atria- Lonely P's, fixed PR interval $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: $2^{\text {nd }}$ Degree AVB Type II
Answer: Each R-R interval is 39 small boxes apart: ventricular rhythm is regular. The P-P intervals 19.5 small boxes apart: atrial rhythm is also regular.
5. 

1. Too fast? __No $\qquad$ Too slow? __Yes $\qquad$ Rate OK? __No $\qquad$
2. QRS wide or narrow? $\qquad$ Wide $\qquad$
3. Check the $P$ waves. The rhythm comes from $\qquad$ Ventricles- Lonely P's, erratic PR interval- P's don't come before every QRS $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: $3^{\text {rd }}$ Degree AVB/ Complete HB
Answer: Each R-R interval is 42 small boxes apart: ventricular rhythm is regular. P-P intervals are 18 small boxes apart: atrial rhythm is regular. P waves are present, some are hidden (in the QRS complex or T wave). When visible, each P wave is normal and consistent in shape, size and direction. There are more $P$ waves than QRS complexes, > 1:1. However, there is no relationship between the $P$ waves and QRS complexes. Therefore, no ratio can be determined since the atrial rhythm is independent of the ventricular rhythm.
5. 

1. Too fast? $\qquad$ No $\qquad$ Too slow? __No $\qquad$ Rate OK? __Yes $\qquad$
2. QRS wide or narrow? $\qquad$ Narrow $\qquad$
3. Check the P waves. The rhythm comes from __Atria- $\qquad$
4. Is the pattern regular or irregular? __Atria- Lengthening PR interval with a Lonely P $\qquad$
The rhythm is: $2^{\text {nd }}$ Degree AVB Type I
Answer: Each R-R interval is 20 small boxes apart except for the gaps: ventricular rhythm is irregular (or "regular except"). Each P-P interval 19 small boxes apart: atrial rhythm is regular.

5. Too fast? __Yes $\qquad$ Too slow? __No $\qquad$ Rate OK? __No $\qquad$
6. QRS wide or narrow? __Wide $\qquad$
7. Check the P waves. The rhythm comes from __Ventricles- Not visible $\qquad$
8. Is the pattern regular or irregular? $\qquad$ Irregular $\qquad$
The rhythm is: Ventricular fibrillation (fine)
Answer: Only ventricular fibrillation waves are present. There are no R-R or P-P intervals to measure.
9. 

1. Too fast? $\qquad$ Yes $\qquad$ Too slow? __No $\qquad$ Rate OK? __No $\qquad$
2. QRS wide or narrow? $\qquad$ Wide $\qquad$
3. Check the P waves. The rhythm comes from __Ventricles- not visible $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Irregular $\qquad$
The rhythm is: Ventricular fibrillation (course)
Answer: Only ventricular fibrillation waves are present. There are no R-R or P-P intervals to measure.
5. 

1. Too fast? $\qquad$ Yes $\qquad$ Too slow? ___No $\qquad$ Rate OK? $\qquad$ No $\qquad$
2. QRS wide or narrow? $\qquad$ Wide $\qquad$
3. Check the P waves. The rhythm comes from $\qquad$ Ventricles- not visible $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Regular $\qquad$
The rhythm is: Ventricular tachycardia
Answer: Each Q-Q (negative waveforms, rather than R's which are positive) interval is 9 small boxes apart: ventricular rhythm is regular. P-P intervals cannot be measured as there are no P waves present.
5. 

1. Too fast? __No $\qquad$ Too slow? __No $\qquad$ Rate OK? __No $\qquad$
2. QRS wide or narrow? $\qquad$ Not visible $\qquad$
3. Check the P waves. The rhythm comes from ___Not visible $\qquad$
4. Is the pattern regular or irregular? $\qquad$ Not visible $\qquad$
The rhythm is: Asystole
Answer: Since there is no electrical activity occurring, there are no R-R or P-P intervals to measure.
